

Highlights

- US 2023 planted acreage prospects have been reviewed. The current projections are based on the IHS Markit November winter wheat survey and economic analysis of other crops. We are using the latest estimates from USDA for 2022 acreage. We will conduct a review of 2022 acreage for the major crops after the December release of FSA data and make any necessary adjustments at that time. We expect USDA to adjust 2022 acreage in its *Crop Production 2022 Summary* that will be issued in January.
- US corn acreage for 2023 is projected to total 92.0 million, only 25,000 acres above the IHS Markit October projection and 3.4 million above 2022.
- US soybean acreage for 2023 is projected to total 88.5 million, unchanged from the IHS Markit October projection but 1.1 million above 2022.
- US all wheat acreage for 2023 is projected to total 47.2 million, 155,000 acres below the IHS Markit October projection but 1.4 million above 2022.
- US all cotton acreage for 2023 is projected to total 11.2 million, down 1.9 million acres from the IHS Markit October projection and 2.6 million below 2022.
